

# Mathematical Geoscience

A. C. Fowler

January 10, 2011

# Contents

Preface . . . . .	x
<b>1 Mathematical modelling</b>	<b>1</b>
1.1 Conservation laws and constitutive laws . . . . .	2
1.2 Non-dimensionalisation . . . . .	3
1.2.1 Scaling . . . . .	5
1.2.2 Approximations . . . . .	5
1.3 Qualitative methods for differential equations . . . . .	6
1.3.1 Oscillations . . . . .	7
1.3.2 Relaxation oscillations . . . . .	10
1.3.3 Hysteresis . . . . .	11
1.3.4 Resonance . . . . .	15
1.4 Qualitative methods for partial differential equations . . . . .	19
1.4.1 Waves . . . . .	19
1.4.2 Burgers' equation . . . . .	26
1.4.3 The Fisher equation . . . . .	28
1.4.4 Solitons . . . . .	29
1.4.5 Nonlinear diffusion: similarity solutions . . . . .	30
1.4.6 The viscous droplet . . . . .	32
1.4.7 Advance and retreat: waiting times . . . . .	34
1.4.8 Blow-up . . . . .	36
1.4.9 Reaction-diffusion equations . . . . .	42
1.5 Notes and references . . . . .	54
Exercises . . . . .	57
<b>2 Climate dynamics</b>	<b>66</b>
2.0.1 Radiation budget . . . . .	66
2.1 Radiative heat transfer . . . . .	67
2.1.1 Local thermodynamic equilibrium . . . . .	68
2.1.2 Equation of radiative heat transfer . . . . .	69
2.1.3 Radiation budget of the Earth . . . . .	69
2.1.4 The Schuster-Schwarzschild approximation . . . . .	73
2.1.5 Radiative heat flux . . . . .	74
2.1.6 Scattering . . . . .	75
2.1.7 Troposphere and stratosphere . . . . .	76
2.1.8 The ozone layer . . . . .	77

2.2	Convection . . . . .	81
2.2.1	The wet adiabat . . . . .	82
2.3	Energy balance models . . . . .	84
2.3.1	Zonally averaged energy balance models . . . . .	85
2.3.2	Carbon dioxide and global warming . . . . .	87
2.3.3	The runaway greenhouse effect . . . . .	91
2.4	Ice ages . . . . .	93
2.4.1	Ice-albedo feedback . . . . .	95
2.4.2	The Milankovitch theory . . . . .	98
2.4.3	Nonlinear oscillations . . . . .	99
2.4.4	Heinrich events . . . . .	100
2.4.5	Dansgaard–Oeschger events . . . . .	101
2.4.6	The 8,200 year cooling event . . . . .	104
2.4.7	North Atlantic salt oscillator . . . . .	107
2.5	Snowball Earth . . . . .	111
2.5.1	The carbon cycle . . . . .	113
2.5.2	The rôle of the oceans . . . . .	117
2.5.3	Ocean acidity . . . . .	120
2.6	Notes and references . . . . .	122
	Exercises . . . . .	126
<b>3</b>	<b>Oceans and atmospheres</b>	<b>142</b>
3.1	Atmospheric and oceanic circulation . . . . .	142
3.2	The geostrophic circulation . . . . .	144
3.2.1	Eddy viscosity . . . . .	144
3.2.2	Energy transport . . . . .	145
3.2.3	Global energy balance . . . . .	149
3.2.4	Choosing coordinates . . . . .	150
3.2.5	Non-dimensionalisation . . . . .	152
3.2.6	Day and night, land and ocean . . . . .	155
3.2.7	Parameter estimates . . . . .	155
3.2.8	Basic reference state . . . . .	157
3.2.9	A reduced model . . . . .	158
3.2.10	Geostrophic balance . . . . .	160
3.3	The planetary boundary layer . . . . .	160
3.4	Poincaré and Kelvin waves . . . . .	162
3.5	The quasi-geostrophic approximation . . . . .	165
3.5.1	Boundary conditions . . . . .	169
3.5.2	The day after tomorrow . . . . .	172
3.6	Rossby waves . . . . .	175
3.6.1	Baroclinic instability . . . . .	176
3.6.2	The Eady model . . . . .	177
3.7	Frontogenesis . . . . .	180
3.7.1	Depressions and hurricanes . . . . .	181
3.8	The mixed layer and the wind-driven oceanic circulation . . . . .	183

3.9	Western boundary currents: the Gulf Stream . . . . .	189
3.9.1	Effects of basal drag . . . . .	189
3.9.2	Effects of lateral drag . . . . .	191
3.10	Global thermohaline circulation . . . . .	192
3.11	Tides and tsunamis . . . . .	193
3.11.1	The tidal equations . . . . .	194
3.11.2	Ocean tides . . . . .	199
3.11.3	Seiches . . . . .	201
3.11.4	Amphidromic points . . . . .	202
3.11.5	Tsunamis . . . . .	206
3.12	Notes and references . . . . .	211
	Exercises . . . . .	213
<b>4</b>	<b>River flow</b>	<b>223</b>
4.1	The hydrological cycle . . . . .	223
4.2	Chézy's and Manning's laws . . . . .	224
4.3	The flood hydrograph . . . . .	226
4.4	St. Venant equations . . . . .	230
4.4.1	Non-dimensionalisation . . . . .	231
4.4.2	Long wave and short wave approximation . . . . .	232
4.4.3	The monoclinal flood wave . . . . .	233
4.4.4	Waves and instability . . . . .	236
4.5	Nonlinear waves . . . . .	238
4.5.1	Characteristics . . . . .	238
4.5.2	Roll waves . . . . .	239
4.5.3	Tidal bores . . . . .	250
4.6	Notes and references . . . . .	259
	Exercises . . . . .	263
<b>5</b>	<b>Dunes</b>	<b>270</b>
5.1	Patterns in rivers . . . . .	270
5.2	Dunes . . . . .	273
5.2.1	Sediment transport . . . . .	276
5.2.2	Bedload . . . . .	277
5.2.3	Suspended sediment . . . . .	278
5.3	The potential model . . . . .	279
5.4	St. Venant type models . . . . .	283
5.5	A suspended sediment model . . . . .	286
5.6	Eddy viscosity model . . . . .	289
5.6.1	Orr-Sommerfeld equation . . . . .	289
5.6.2	Orr-Sommerfeld-Exner model . . . . .	294
5.6.3	Well-posedness . . . . .	295
5.7	Mixing-length model for aeolian dunes . . . . .	297
5.7.1	Mixing-length theory . . . . .	298
5.7.2	Turbulent flow model . . . . .	299

5.7.3	Boundary conditions . . . . .	300
5.7.4	Eddy viscosity . . . . .	301
5.7.5	Surface roughness layer . . . . .	301
5.7.6	Outer solution . . . . .	302
5.7.7	Determination of $p_{10}$ . . . . .	305
5.7.8	Matching . . . . .	306
5.7.9	Shear layer . . . . .	307
5.7.10	Linear stability . . . . .	309
5.8	Separation at the wave crest . . . . .	312
5.8.1	Formulation of Hilbert problem . . . . .	315
5.8.2	Calculation of the free boundary . . . . .	319
5.9	Notes and references . . . . .	321
	Exercises . . . . .	329
<b>6</b>	<b>Landscape evolution</b>	<b>336</b>
6.0.1	Weathering . . . . .	336
6.1	The erosional cycle . . . . .	337
6.2	River networks . . . . .	338
6.3	Denudation models . . . . .	339
6.3.1	Sediment transport . . . . .	340
6.3.2	Non-dimensionalisation . . . . .	341
6.3.3	The issue of time scale . . . . .	344
6.4	Channel-forming instability . . . . .	344
6.4.1	Boundary conditions . . . . .	345
6.4.2	Steady state solution . . . . .	346
6.4.3	Uplift and denudation . . . . .	348
6.4.4	Geomorphically concave slopes are unstable . . . . .	349
6.4.5	WKB approximation at high wavenumber . . . . .	352
6.4.6	Turning point analysis . . . . .	354
6.4.7	Rivulet theory: $\delta \ll 1$ . . . . .	359
6.5	Channel formation . . . . .	363
6.5.1	Channel solutions . . . . .	366
6.5.2	Bank migration, stability and blow up . . . . .	367
6.6	Channels and hillslope evolution . . . . .	368
6.6.1	Hillslope evolution . . . . .	371
6.6.2	Detachment limited erosion . . . . .	372
6.6.3	Headward erosion . . . . .	376
6.6.4	Side-branching . . . . .	377
6.7	Notes and references . . . . .	377
	Exercises . . . . .	381
<b>7</b>	<b>Groundwater flow</b>	<b>393</b>
7.1	Darcy's law . . . . .	394
7.1.1	Homogenisation . . . . .	396
7.1.2	Empirical measures . . . . .	398

7.2	Basic groundwater flow . . . . .	399
7.2.1	Boundary conditions . . . . .	399
7.2.2	Dupuit approximation . . . . .	400
7.3	Unsaturated soils . . . . .	404
7.3.1	The Richards equation . . . . .	404
7.3.2	Non-dimensionalisation . . . . .	405
7.3.3	Snow melting . . . . .	406
7.3.4	Similarity solutions . . . . .	410
7.4	Immiscible two-phase flows: the Buckley-Leverett equation . . . . .	411
7.5	Heterogeneous porous media . . . . .	414
7.5.1	Dual porosity models . . . . .	414
7.6	Contaminant transport . . . . .	421
7.6.1	Reactive dual porosity models . . . . .	422
7.7	Environmental remediation . . . . .	426
7.7.1	Reactive groundwater flow . . . . .	426
7.7.2	Biomass modelling . . . . .	428
7.7.3	Non-dimensionalisation . . . . .	428
7.8	Three specific remediation problems . . . . .	429
7.9	Precipitation and dissolution . . . . .	440
7.10	Consolidation . . . . .	445
7.11	Compaction . . . . .	448
7.12	Notes and references . . . . .	453
	Exercises . . . . .	457
<b>8</b>	<b>Mantle convection</b> . . . . .	<b>466</b>
8.1	Plate tectonics . . . . .	466
8.2	Rayleigh-Bénard convection . . . . .	471
8.2.1	Boundary conditions . . . . .	473
8.2.2	Non-dimensionalisation . . . . .	473
8.2.3	Boussinesq approximation . . . . .	475
8.2.4	Linear stability . . . . .	476
8.3	Nonlinear stability; planforms . . . . .	477
8.3.1	Landau equation . . . . .	478
8.3.2	Plan forms . . . . .	481
8.3.3	Dislocations and chaos . . . . .	487
8.4	High Rayleigh number convection . . . . .	489
8.4.1	Boundary layer theory . . . . .	490
8.5	Variable viscosity . . . . .	496
8.5.1	Rheology of polycrystalline rocks . . . . .	496
8.5.2	Governing equations . . . . .	497
8.5.3	Boundary conditions . . . . .	497
8.5.4	Boundary layer analysis . . . . .	498
8.5.5	Summary . . . . .	514
8.6	Subduction and the yield stress . . . . .	516
8.6.1	Near-surface mantle rheology . . . . .	516

8.6.2	The plastic lid: failure and subduction . . . . .	519
8.7	Tectonics on Venus . . . . .	520
8.8	Notes and references . . . . .	524
	Exercises . . . . .	532
<b>9</b>	<b>Magma transport</b>	<b>539</b>
9.1	The magmatic cycle . . . . .	540
9.2	Mechanisms of magma ascent . . . . .	542
9.3	Phase diagrams and geochemistry . . . . .	544
9.3.1	Phase diagrams . . . . .	545
9.3.2	Ternary phase diagrams . . . . .	548
9.3.3	Olivine . . . . .	552
9.3.4	Summary . . . . .	554
9.3.5	Melting . . . . .	555
9.3.6	Continental crust . . . . .	558
9.3.7	MORB, OIB, CFB . . . . .	558
9.3.8	Granite . . . . .	559
9.4	Melt transport in the asthenosphere . . . . .	560
9.4.1	Summary . . . . .	564
9.4.2	Simplification . . . . .	564
9.4.3	Boundary conditions . . . . .	567
9.4.4	Thermodynamic equilibrium . . . . .	568
9.4.5	Stefan condition . . . . .	570
9.4.6	Steady state solution, one dimension . . . . .	570
9.4.7	Outer solution . . . . .	570
9.4.8	Boundary layer at $z = 0$ . . . . .	571
9.4.9	Boundary layer at $z = 1$ . . . . .	571
9.5	Magmafracturing in the lithosphere . . . . .	573
9.5.1	Fracture mechanics . . . . .	573
9.5.2	Magma dynamics . . . . .	576
9.5.3	Stress intensity factor . . . . .	577
9.5.4	Non-dimensionalisation and solution . . . . .	578
9.6	Crystallisation in magma chambers . . . . .	581
9.6.1	The formation of magma chambers . . . . .	581
9.6.2	Nucleation and crystallisation . . . . .	582
9.6.3	Double-diffusive convection . . . . .	591
9.6.4	Layered igneous intrusions . . . . .	593
9.7	Volcanic eruptions . . . . .	597
9.7.1	Types of eruption . . . . .	598
9.7.2	Strombolian eruptions . . . . .	599
9.7.3	Plinian eruptions . . . . .	600
9.8	Notes and references . . . . .	600
	Exercises . . . . .	607

<b>10</b>	<b>Glaciers and ice sheets</b>	<b>618</b>
10.1	Dynamic phenomena . . . . .	619
10.1.1	Waves on glaciers . . . . .	619
10.1.2	Surges . . . . .	621
10.1.3	Ice streams . . . . .	623
10.1.4	Ice shelf instability . . . . .	625
10.1.5	Tidewater glaciers . . . . .	626
10.1.6	Jökulhlaups . . . . .	626
10.2	The shallow ice approximation . . . . .	627
10.2.1	Glaciers . . . . .	627
10.2.2	Ice sheets . . . . .	632
10.2.3	Temperature equation . . . . .	634
10.2.4	A simple non-isothermal ice sheet model . . . . .	637
10.2.5	Using the equations . . . . .	645
10.2.6	Ice shelves . . . . .	647
10.2.7	The grounding line . . . . .	650
10.2.8	Marine ice sheet instability . . . . .	654
10.3	Sliding and drainage . . . . .	656
10.3.1	Röthlisberger channels . . . . .	662
10.3.2	Linked cavities . . . . .	664
10.3.3	Canals . . . . .	667
10.3.4	Ice streams . . . . .	669
10.4	Waves, surges and mega-surges . . . . .	674
10.4.1	Waves on glaciers . . . . .	674
10.4.2	Surges . . . . .	680
10.4.3	Sliding and ice streams . . . . .	683
10.4.4	Heinrich events and the Hudson strait mega-surge . . . . .	686
10.5	Drumlins and eskers . . . . .	687
10.5.1	Drumlins . . . . .	689
10.5.2	Eskers . . . . .	701
10.6	Glaciology on Mars . . . . .	705
10.6.1	Non-dimensionalisation . . . . .	710
10.6.2	Multiple steady states. . . . .	713
10.6.3	Trough formation . . . . .	715
10.6.4	Multiple troughs . . . . .	717
10.7	Notes and references . . . . .	719
	Exercises . . . . .	730
<b>11</b>	<b>Jökulhlaups</b>	<b>742</b>
11.1	The Nye model . . . . .	743
11.2	Nondimensionalisation . . . . .	745
11.3	Boundary conditions and lake refilling . . . . .	748
11.4	Simplification of the model . . . . .	749
11.5	Periodic oscillations . . . . .	751
11.5.1	Breaking the seal . . . . .	753

11.5.2	Wide channels and the 1996 eruption . . . . .	760
11.6	Cauldrons and calderas . . . . .	760
11.6.1	The beam boundary layer . . . . .	768
11.6.2	Similarity solutions . . . . .	771
11.7	Floods from ice sheets . . . . .	776
11.8	Notes and references . . . . .	782
	Exercises . . . . .	788
<b>Appendix A</b>		
	<b>The Schwarzschild-Milne integral equation</b>	<b>796</b>
	Exercises . . . . .	800
<b>Appendix B</b>		
	<b>Turbulent flow</b>	<b>801</b>
B.1	The Reynolds equation . . . . .	802
B.2	Eddy viscosity . . . . .	802
B.3	Pipe flow . . . . .	804
B.4	Extension to rivers . . . . .	804
B.5	Manning's law . . . . .	805
B.6	Entry length . . . . .	805
B.7	Sediment deposition . . . . .	806
<b>Appendix C</b>		
	<b>Asymptotic solution of the Orr–Sommerfeld equation</b>	<b>808</b>
<b>Appendix D</b>		
	<b>Melting, dissolution, and phase changes</b>	<b>817</b>
D.1	Thermodynamics of pure substances . . . . .	817
D.2	The energy equation . . . . .	819
D.3	Phase change: Clausius-Clapeyron equation . . . . .	820
D.4	Phase change in multi-component materials . . . . .	821
D.5	Melting and freezing . . . . .	823
D.6	Precipitation and dissolution . . . . .	824
D.7	Evaporation and boiling . . . . .	825
D.8	Chemical reactions . . . . .	825
D.9	Surface energy . . . . .	826
D.10	Pre-melting . . . . .	827
D.11	Liesegang rings . . . . .	829
	Exercises . . . . .	832
<b>Appendix E</b>		
	<b>Averaged equations in two phase flow</b>	<b>835</b>
E.1	Discontinuities and jump conditions . . . . .	835
E.2	Averaging methods . . . . .	836
E.3	Mass and momentum equations . . . . .	838

E.4	Energy equation . . . . .	839
E.5	Jump conditions . . . . .	839
E.6	Nye's energy equation in a subglacial channel . . . . .	842
	Exercises . . . . .	845
