

MID-SEMESTER ASSESSMENT PAPER

MODULE CODE: MA4002

SEMESTER: Spring 2015

MODULE TITLE: Engineering Mathematics 2

DURATION OF EXAMINATION: 45 minutes

LECTURER: Prof. N. Kopteva

PERCENTAGE OF TOTAL MARKS: **25%**

**Please, do NOT open this paper
until ANNOUNCED by your
lecturer**

**EVERYBODY IS SUPPOSED TO START AT THE
SAME TIME**

1 (a) Evaluate the indefinite integral $\int \frac{x+1}{\sqrt{x+2}} dx$.
 Hint: use an appropriate substitution. 2%

(b) Calculate the area between $y = 3^x - \frac{1}{x^{3/4}}$ and the x -axis for $1 \leq x \leq 2$. 2%

(c) Express as a definite integral and then evaluate the limit of the Riemann sum $\lim_{n \rightarrow \infty} \sum_{i=1}^n \frac{1}{(c_i + 1)^3} \Delta x$, where $c_i \in [x_{i-1}, x_i]$, and we use the partition P with $x_i = 1 + \frac{2i}{n}$ for $i = 0, 1, \dots, n$ and $\Delta x \equiv x_i - x_{i-1}$. 2%

(d) Evaluate $\frac{d}{dx} \int_{\sqrt{x+1}}^{2x} \cos(t^4) dt$. 1%

(e) Find an upper bound for the error E_T in the Trapezoidal Rule approximation of the definite integral $\int_0^3 \cos(3x) dx$, using n subintervals. Choose n such that $E_T \leq 10^{-2}$.
 Hint: evaluate $M_2 \equiv \max_{x \in [0, 3]} \left| \frac{d^2}{dx^2} \cos(3x) \right|$. 2%

.....

2 Evaluate the indefinite integral $\int (2 + \cos x) \sin^3 x dx$. 3%

.....

3 Find the average value of the function $\frac{x+3}{x^2 - 8x + 16}$ on the interval $[5, 7]$. 4%

.....

4 Evaluate the indefinite integral $\int x \ln^2 x dx$.
 (Hint: use integration by parts.) 4%

.....

5 Perform a partial fraction expansion of $\frac{x^2 - 4x - 8}{x^2(x^2 - 4)}$;

then evaluate the indefinite integral $\int \frac{x^2 - 4x - 8}{x^2(x^2 - 4)} dx$. 5%

.....
